

## Assembly system

- **Ideal for:** In the changing rooms of hairdressing salons, convention centers or theaters, for example, clothes on hangers touch each other closely over a period of time, which can be a concern for both the locker-room owners and their customers.
  - **Benefit:** Make sure that clothes on hangers do not touch each other.
  - **Clever:** Width corresponding to the main cupboard depths: 60cm foldable on each side according to a groove allowing to reduce the space requirement to 45cm (depths of the smallest cupboards).
  - **Compatible:** With a hooking and locking cutout designed from a circle slightly larger in diameter than the largest hooking bars.
  - **Total protection:** With a total length of 130 cm to separate the longest garments over their entire height.
- Delivered folded in 3 with an extension inserted by tab + slot, and dimensioned for a good fit to the main part without "bending" between the two parts.
  - Quick hooking system
  - Warranty 2
  - Materials: PP recyclable

## Good for:
